Regional Transportation Authority of Central Oklahoma

FOR IMMEDIATE RELEASE

January 4, 2023

Regional Transportation Authority to host virtual town hall on future transit options in Oklahoma City for West and Airport Corridors

OKLAHOMA CITY – [The Regional Transportation Authority of Central Oklahoma \(RTA\)](#) will host a virtual town hall meeting to share information on three high potential alternatives (or routes) for the RTA's West and Airport Corridors. Residents are encouraged to attend the meeting to learn more about the high-capacity transit connecting downtown Oklahoma City to western Oklahoma City as well as a connection to Will Rogers World Airport.

RTA will host the virtual event on Thursday, January 18 from 5:30 to 7:00 p.m. The meeting will take place via Zoom and can be accessed by visiting tinyurl.com/RTATownHall. Residents can learn more about the meeting, the Alternatives Analysis process and potential routes by visiting RTAMoves.com.

The RTA identified the West and Airport Corridors in the [2021 Transit System Plan](#) as two regional corridors to be explored for high-capacity transit routes. Similar to the process recently completed for the North/South and East Corridors, the West and Airport Corridors are in development through the Alternatives Analysis process and consultants have identified three potential routes for both corridors.

"We're moving forward through the Alternatives Analysis process for the West and Airport Corridors and beginning to look at potential routes," RTA Interim Executive Director Jason Ferbrache said. "Engaging with the community is critical for a successful transit project, and the team is eager to share the preliminary set of potential alternatives with residents in the Central Oklahoma Region."

The West Corridor will connect downtown Oklahoma City to western Oklahoma City. The Airport Corridor will connect Will Rogers World Airport with downtown Oklahoma City. The high-potential alternatives for the RTA's West and Airport Corridors will be evaluated to better understand the strengths of each potential alternative. The map below shows the corridors currently under study and high potential alternatives within those corridors.

High Potential Alternatives
